Please mark your calendars and join us for the following lectures at the Disney Vero Beach Resort. Top Florida Tech research professors will share their knowledge on environmental issues facing Florida and beyond. Registration is required.

- **Global Climate Change: A Real Threat to Florida and the Planet**
  - Dr. Richard Aronson  
  - Wednesday, Feb. 19 @ 4 p.m.
  - This important conversation will explore the long-term ecological challenges caused by climate change and the efforts being made to overcome them.

- **Using Science to Enhance Sport Fishing**
  - Dr. Aaron Adams  
  - Thursday, March 6 @ 4 p.m.
  - Bonefish species are declining rapidly worldwide. Dr. Adams discusses the challenges facing the offshore fishing industry from an ecological perspective and how he’s working to preserve bonefish and tarpon for future generations to enjoy.

- **Reviving and Preserving the Indian River Lagoon**
  - Dr. Jonathan Shenker  
  - Thursday, March 20 @ 4 p.m.
  - Learn about the biological and ecological factors affecting fish populations and how the health of the Indian River Lagoon is vital to a diverse range of fish.

- **Using Aquaculture to Mitigate the Adverse Environmental Impact of the Aquarium Industry**
  - Dr. Junda Lin  
  - Thursday, April 10 @ 4 p.m.
  - Learn about aquaculture of marine ornamental species as a viable alternative to wild collection and as a way to reduce damage to fragile reef ecosystems.
