

Get collaborator invitation from Joey or Pietro

Create a local folder for holding GitHub code

Open cmd in directory and type git clone [url of HEP repo]

cd into HEP repo

git submodule add [url of repo you want to add]

\*\*\* This step is only done once for any repo you want to add to the HEP group repo

git add .

git commit -a -m "[Commit Message]"

git push origin main

When updating a linked repo, git pull from main repo into local repo, make necessary changes, and then push to main repo

git pull

update / add files in your local repo

git add .

git commit -a -m "[Commit Message]"

git push origin main

If updating repo by using add file / upload file, make sure to pull the changes into local repo to prevent merge conflicts

git pull
