Water Purifier

System: Millipore Direct-Q 5  
Catalogue Number: ZRQS6005Y  
Serial Number: F8KNO02394H  
Manufacturing Date: 8/12/08  
Installation Date: 12/15/08  
Installed By: Carlos  
For technical assistance: 800-645-5476 ext. Parts-8156, Service-8198  

Filters:  
1. Progard 2 Pretreatment Pak: PR0G 000 02  
2. Quantum VX: QTUM 000 IX  
3. Millipak 40: MPGL 04S K2  
4.  

The manual is located in Drawer 1 of the filing cabinet and is in both book form and is on a CD. The folder with the manual also contains installation information, filter changing instructions, and serial number information. The screen should show the purity of the water which should be around 18 MΩ. The water that is produced from the water purifier is sterile water. There is a black valve on the side of the unit that dispenses reverse osmosis water (RO water) this water is below DI purity and should only be used for things that ask for RO water. There is a black tube that deposits water directly into the sink. Water will randomly flow from this tube. This water is that which is rejected as impure and should not be used for chemical uses.

Filter Replacement: The filters need to be replaced around every six months although this depends on the amount of water that is being used. There will be a yellow light once the water falls below a certain purity indicating that the filters need to be replaced. The filters and the catalogue numbers are above and should be ordered prior to when they are needed so as to always have them handy when needed. The third filter which is responsible for sterilizing the water comes in a pack of 2. Whenever the filters are being changed the system should first be placed on standby. Each of the filters is replaced by following the instructions that come with the new filter. Additionally the technical assistance service number may be called and someone can walk you through the changing procedure. When changing the Quantum filter and the Progard filter both require a bit of force. If the Quantum filter is not properly seated the door will not shut-listen for the clicks of the door shutting to be sure. The Millipak filter is screwed into place but should not be over-tightened.
