

Undergraduate students are very welcome in our group.

If you are a student pursuing a B.S. in one of the sciences (or in engineering) and you are interested in a new and exciting field of chemistry, you are encouraged to contact Dr. Schoedel via email; **aschoedel@fit.edu**.

We offer you opportunities for research that is non-traditional and has elements of inorganic, organic, physical chemistry or even biochemistry. The focus, of course, also depends on your particular research interests so we will provide you with cutting-edge research projects that can ultimately lead to high impact publications.
